

Network Setup

Installation Guide

CONNECTING the 'Xeco Gateway'

1. Enter all of the MAC ID#'s into the Xeco Portal in the proper location, using the MAC ID Worksheet. (i.e.: Gateway, Meter, Repeater and Switches)
2. Identify the nearest internet connection to where the Meter is located.
 - a. **Make sure the Xeco Gateway has the correct SD Card (Operating Software) inserted at the end of the Xeco Gateway device.**
 - b. **Plug an ethernet cable into the Xeco Gateway device. Then, plug power to the Xeco Gateway device. (Port must be opened by Client's IT personnel).**
 - c. **Find a location for the 5Ghz Repeater to be plugged near the Xeco Gateway device, no closer than 15 feet from the Xeco Gateway device.**
 - d. **Once the Gateway and Repeater are plugged in, GO TO the Energy Portal 'Communications' section to verify the Gateway and Repeater is communicating.**
