

“Real-Time” Energy Tracking Portal

QUICK USER GUIDE

The Xeco Energy Portal is an automated metering system designed to track real-time costs, savings and live energy usage analytics for better tracking your daily electricity usage.

The Xeco “Real-Time” Energy Portal is very simple to use. Since Xeco’s real-time tracking system is designed to work automatically and directly from all the meter.

To Begin;

1. Login into the Portal at <http://portal.xecoenergy.com>
2. Enter your Username and Password.
3. Click on “**Energy Usage**” tab on the left Navigation Bar.
4. Click on “**Create Monthly Cost Savings Report**” button.
5. Fill out the savings report form according to each field, then scroll to the bottom and “**Submit**”.

Repeat steps 2-5 each month when you receive the new month’s electric bill.

Important: When each month’s electric bill is entered into the Xeco Portal, each month’s electric bill data will be transferred to the monthly accumulative Energy Savings Report (ESR) for management to review.

To view the most current **ESR** report;

1. Click on the link “**Generate ESR**” located in the upper right-hand corner of the Energy Usage page and a current PDF report will be generated. Please note that if any month’s electric bill has not been entered into the portal, it will not show up on the **Energy Savings Report (ESR)**

AND THAT’S IT. The Xeco ‘Real-Time’ Energy Portal does the rest.
